

SOLARLIGHTCAP DEVELOPED BY 2C

"I charged it up during the kayaking and then at night I used it to see what I was cooking and eating for dinner... other campers were very impressed."

101 USES
FROM FORESTS TO CONCRETE JUNGLES

SLC-K
A High Visibility Special designed for water sports, or workwear.

The SLC-K has been designed with special features to cope with different weather and physical conditions.

- The 2C peak and the flouro orange fabric combined with the reflective tape has high visibility. Essential when on the water, especially with early morning starts and caught out late at night
- The fabric has rapid water wicking and diffusion characteristics. For the wearer this means that the fabric will draw moisture away from the skin without sticking and will rapidly diffuse and dry to leave you cool and comfortable. This also means that if the cap gets wet it will dry fast.
- The fabric also has a smooth finish comfortable against the skin and resistant to catching on bushes and beard growth, and is UV rated.
- Styling has kept weight and size to a minimum as space is often at a premium.
- The SLC-K has different wearing options so that it can deal with cold, heat, wind, sea spray and hard physical activity.

1. Pulled to center back and bound using elastic loop.
- Cap protection of crown from sun.

2. Snapped together at center back.
- Protection of crown, back neck and side face from sun.

3. Snapped together at center front.
- Protection of crown, back neck, side and front face from sun, wind and sea spray.

4. Wrap center fronts to sides and snap together.
- Maximum protection of crown, back neck, side and front face from sun and wind and sea spray.

Don't venture into the outdoors without your Solar Light High-Viz Cap from 2C

When your on the water or working and it starts to get dark, its not a problem. With the florescent UV resistant material, reflective edge and built in solar charging lighting system, you can be sure to see and be seen. The lights are designed to point downwards, away from your face and other people's eyes, out to about six feet in front of you....with your schoice of dimmer settings and flashing modes. There's even an accurate emergency/SOS flash in case you're in trouble and need to signal for rescue.

Sometimes the simplest ideas are the best and what could be better than a cap you

wear during the day, protecting you from the elements and all the while recharging itself in the process, that then becomes a light when needed. No need for batteries, no need for a spare hand to hold a light—just use your head with a SolarLightCap.

Once you've got one, you'll discover dozens of uses for it. It has taken **2C** more than 3 years to develop the **SolarLightCap** using **NewGreenThining** and special **2C**Technology to maximize performance with a goo looking ergonomic weatherproof design that has already been judged a **TechnoFasion Award Winner**.
