

# SOLARLIGHTCAP DEVELOPED BY 2C

The essential solar charging light that you wear

“ Having my hands free on the boat, and a good light to see by, is invaluable. It even floats! ”

- UP TO 36 HOURS operation on dim\*
- OVER 3 HOURS operation on full beam\*
- Solar powered - no need for batteries
- Water proof - floats for easy recovery

\* Based on fully charged cap. Please see specifications for charging/performance time

## SEE AND BE SEEN... EASE, CONVENIENCE, SAFETY.

- Features leading US technology
- Product designed in New Zealand. Produced in China by a US company
- FCC certified
- One size fits most people
- Environmentally friendly solar-powered. Low pollution NiMH battery stores solar energy for several months
- Charged and recharged by daylight. Over 3 hours of light on full power. Up to 36 hours of light on other modes

- Range of designs, colors & styles
- Cap is hand washable (do not submerge peak)
- Weatherproof IP66
- Floats
- Breathable cotton

- Semi-flexible pre-bent peak
- 100,000 hours ultra bright warm white LEDs
- Two discreet lights - ultra bright LEDs. Downward angle means the LEDs don't shine into other people's eyes
- Reserve battery - small blips or 20 minutes on dimmer after power off

- Easy to use one-button operation. Full beam or variable dimmer settings.
- Four modes:
  - Steady on
  - Alert flasher
  - SOS blinking
  - Partyflash
- Microprocessor controlled P.W.M. operation

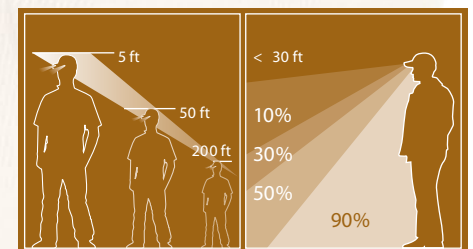

### Don't go out on the water without your SolarLightCap from 2C.

When you're on the boat, you often don't have enough hands, especially when it starts to get dark. Here's the answer. Wear one of our caps during day then simply push the button on the peak and you've got a warm light shining at a carefully calculated angle, away from your face and other people's eyes, out in front of you... with your choice of full beam, variable dimmer settings and flashing modes. There's even an emergency/SOS flash in case you're in trouble and need to signal your location.

Sometimes the simplest ideas are the best and what could be better than a cap you wear during the day like a normal cap (recharging itself in the process) that then becomes a light when it gets darks. No need for batteries. You don't need a spare hand to carry the flashlight. No fumbling around in the dark. Use your head with a SolarLightCap .

It has taken 2C nearly 5 years to develop the SolarLightCap using NewGreenThinking and special 2Ctechnology to maximize performance within a good looking, ergonomic design that has already been judged a TechnoFashion Award Winner .

Smart design combined with real functionality - get your SolarLightCap now.
